

SWAPNO MONDOL

Software Engineer · Backend · Cloud & DevOps

swapno963@gmail.com · +880 1709-112230 · Dhaka, Bangladesh · Open to EU / US remote or relocation
Portfolio · LinkedIn · GitHub

PROFESSIONAL SUMMARY

Backend-focused Software Engineer with production experience in Go, Python (Django, FastAPI), PostgreSQL, and containerized deployments on Docker and Kubernetes. Delivers multi-tenant APIs, RBAC, and CI/CD across on-premise and AWS. Recent product work: QueryMind — LangGraph NL-to-SQL with org-scoped catalogs, multi-engine adapters, and a policy layer so the LLM cannot authorize writes. Prior remote work with a UK product team; targeting Europe and United States opportunities.

TECHNICAL SKILLS

Backend: Go, Python, Django / DRF, FastAPI, REST APIs, OAuth2, JWT, RBAC, LangGraph, MCP client, sqlglot, Kafka, Celery, Redis, query optimization, multi-database architecture (PostgreSQL, MySQL, Oracle, SQL Server, MongoDB)
Cloud & DevOps: AWS (EC2, VPC, ALB/NLB, ECR, S3, SES, Lambda, ECS), Docker, Kubernetes / K3s, Terraform, Pulumi, Ansible, Helm, Kustomize, CI/CD (GitHub Actions, Jenkins, GitLab), GitOps (Argo CD), Linux, Bash
Observability & Security: Prometheus, Grafana, Loki, Tempo, OpenTelemetry, AWS WAF, Cilium · **Frontend:** TypeScript, React.js, Next.js, Tailwind CSS, Material UI

PROFESSIONAL EXPERIENCE

Backend Developer — Meraki Innovation Jan 2025 – Present
Dhaka, Bangladesh

- Led architecture and development of a configurable multi-tenant dashboard enabling custom widgets from internal databases, external databases, and APIs—with dynamic table generation, secure file uploads, and RBAC-driven workflows.
- Designed a document versioning system with revision tracking and historical management to strengthen auditability in production.
- Owned CI/CD pipelines and production deployments across on-premise Windows Server and AWS using Terraform.
- Containerized backend services with Docker; handled database migrations and production troubleshooting across PostgreSQL and multi-engine environments.

Backend Developer — Cooking Station Sep 2024 – Dec 2024
London, United Kingdom (Remote)

- Maintained and extended a production Django (MVT) application—resolved bugs, shipped new features, and customized the admin panel with minimal disruption.
- Redesigned database schemas for evolving business requirements while preserving data integrity, backward compatibility, and performance.
- Integrated third-party APIs and scheduled jobs; collaborated on deployment workflows, environment setup, and staging/live issue resolution.

SELECTED PROJECTS

QueryMind — Controlled NL-to-SQL & MCP execution | Django · LangGraph · sqlglot · PostgreSQL / MySQL / Oracle / SQL Server

- LangGraph agent for client databases: schema allow-lists, dialect-aware sqlglot validation, SELECT-only SQL. Live: chatapp.clustorflow.com · GitHub: Query-Mind.
- Org admin/member RBAC: admins own the shared catalog and MCP HTTP URL; members only see their own conversations; connections never cross tenants.
- Deterministic policy: MCP for writes/business actions, SQL only for reads. Matching uses tool JSON schema. Writes never fall back to SQL.

ShopVerse — Modular E-commerce Backend | FastAPI · Docker · Nginx · JWT

Microservice backend (User, Product, Order, Inventory) with JWT auth, password hashing, and multi-stage Docker images. Nginx reverse proxy routes external traffic to internal services for scalable local and cloud-ready deployment.

K3s Microservices on AWS with Pulumi | AWS · Pulumi · K3s · Docker · Nginx

Provisioned AWS infrastructure with Pulumi; published Docker images for a Flask API and React frontend; stood up a K3s cluster with Nginx Layer-7 load balancing and verified end-to-end routing.

ADDITIONAL

Languages: English (professional working proficiency) · Work authorization: Bangladesh; seeking EU / US sponsorship or remote-first roles · Available for interviews across CET / EST time zones
