

Swapno Mondol

Software Engineer

[Portfolio](#) || [Linkedin](#) || [GitHub](#)

Email: swapno963@gmail.com, Phone No: (+880) 01709112230

Address: Mirpur 2, Dhaka, Bangladesh

Overview: Backend-focused Software Engineer specializing in microservices-based systems, with strong experience in Django, FastAPI, PostgreSQL, and containerized deployments using Docker. Hands-on with AWS cloud infrastructure and CI/CD pipelines, with growing depth in DevOps practices. Bring working frontend experience in React.js and Next.js, enabling effective collaboration across teams and delivery of scalable, production-ready systems.

Skills :

Backend: Python (Django DRF, FastAPI), RESTful API Design, Multi-database management (Oracle, Postgres, MongoDB)

Frontend: TypeScript, Next.js, React.js, Three.js, Material UI, Tailwind CSS.

Cloud & DevOps: AWS (EC2, S3, Lambda), Terraform, Ansible, CI/CD (GitHub Actions, Jenkins, GitLab).

Professional Work Experience:

Backend Developer-Meraki Innovation, Mirpur 2, BD

Jan 2025 - Present

- Led the architecture and development of a configurable dashboard enabling users to build custom widgets from internal databases, external databases, and APIs. Implemented dynamic table generation, secure file uploads, multi-database support across three engines, and RBAC-driven auto-replacement workflows, balancing flexibility, performance, data integrity, and strict access control in production-grade, multi-tenant environments.
- Designed and implemented a document versioning system with revision tracking and historical version management to ensure auditability and long-term maintainability. Owned CI/CD pipelines and production deployments across on-premise Windows Server environments and AWS cloud infrastructure using Terraform, delivering consistent, repeatable releases and operational stability across environments at scale under real production constraints.

Backend Developer-Cooking Station, London, UK

Sep 2024 - Dec 2024

- Improved an existing Django MVT project by fixing bugs, adding new features and a customized admin panel.
- Redesigned database structure to meet new requirements, incorporating advanced DOM manipulation with JavaScript for efficient frontend updates, and integrating third-party api and cron jobs.

Projects:

ShopVerse – Modular E-commerce Backend: [GitHub Code](#)

A microservice-based backend system for a modern e-commerce platform, built using FastAPI. Designed for scalability, clean separation of concerns, and easy integration with future frontend interfaces.

- **Microservices Architecture:** Separated concerns across User, Product, and Inventory services for better scalability and maintainability.
- **Robust Auth System:** Implemented secure user authentication using JWT and password hashing, with scalable user management.
- **Containerized Deployment:** Each service is containerized with Docker, ensuring easy local development and cloud deployment readiness.
